

VV MVP-F – MATERIAL INTENT OF THE PROJECT

Obligatory Scheme for Applied Research and Development

Total length of the Binding Scheme must not exceed 15 pages.

Project Title	
Principal Investigator	
Applicant Organisation	
Statutory representative(s) of the Applicant	

1. Excellence

- Characterise the proposed process of implementation and the applicability of the expected results
- Define the topicality of the addressed problem in the given field of science and technology and explain the originality of the project idea and the originality of the implementation
- Define the project objectives and describe the feasibility of achieving them
- Describe the proposed methodology for the project, the justification for its selection and the extent to which it is capable of meeting the stated objectives
- Characterise up to 5 of the most important outputs of the Principal Investigator's applied research over the last 5 years; indicate their importance at national and international level
- Characterise up to 3 of the most important projects carried out by the Principal Investigator in the last 5 years in the following structure of information: project title, grant scheme, years of solution, project budget, position of the Principal Investigator in the project, explain the relevance of the project outputs in the national and international context
- Characterise the recognition of the Principal Investigator in the field of applied research, his/her expertise and vision for research team building, further research development and career development
- Describe the competence of the participating research and implementing organisations to tackle the project
- Describe the competence of the individual members of the research team to participate in the submitted project (other than the Principal Investigator)
- Define the involvement of young R&D personnel up to 35 years of age, including PhD. students, in the project

free text

2. Impact

- Describe the benefits of the project for the development of innovation (new products, improved products, new utility materials, new technologies, new services, etc.)
- Describe how you and your international partner will use declared results of the project
- Define the economic benefit of the project (increase in the share of added value, saving of resources, impact on employment, use of domestic raw materials, improvement of human resources, protection of the environment)
- Define the measures to maximise results and impact and how the project results will be communicated
